THE HEATING AND VENTILATING MAGAZINE

INDEX TO VOLUME XVI

NEW YORK
HEATING AND VENTILATING MAGAZINE CO
1123 BROADWAY

Air, effect of sunlight on, William J. Maurer, C. E., March.
Air conditioning the house, experiments in, E. R. Hayhurst, M. D., Feb.
Air cooling and refrigeration—arrangement of system for cooling drinking water, May.
air cooling systems, Jan.
"climate doctors" the latest term for air conditioning engineers, Dec.
special applications of small air cooling systems, Jan.
refrigeration in relation to air conditioning, in war industries, J. I. Lyle, June.
the psychrometric chart explained, L. A. Wilson, Aug.
washer experiences, Samuel R. Lewis and Dr. E. V. Hill, June.
washing and humidification for school buildings, Perry West, June.
Allen, John R., a test of the conductivity of window shades, Feb.
and F. B. Rowley, a fan heating system installed without the use of galvanized iron, Aug.
American Engineering Society, a plan for one, Feb.
engineering standards association formed, July.
American Society of Heating and Ventilating Engineers plans for annual meeting, Jan.
New York Chapter has exhibit of temperature control apparatus, Jan.
Illinois Chapter backs up research bureau project, Jan.
Eastern Pennsylvania Chapter endorses research bureau plan, Jan.
Kansas City Chapter issues program for year, Jan.
new chapters of the society, Feb.
research bureau successfully launched at society's annual meeting in New York, June 28-30, Feb.
New York Chapter hears address on "Superheat," April.
Professor Allen compares ancient and modern building methods at meeting of Kansas City Chapter, April.
Illinois Chapter to conduct tests on steel firebox boilers, April.
Buffalo Chapter discusses liquids used in thermostatic valves, April.
organization of Boston Chapter, April.
Pittsburgh Chapter holds first regular meeting, April.
the director of the heating engineers' research bureau, May.
New York Chapter elects new officers, May.
annual meeting of Eastern Pennsylvania Chapter, May.
bureau of research to start operations this summer, June.
booklet on heating engineers' research bureau, June
meeting of research bureau committee, June.
appointment of legislative committee, June.
New York Chapter closes successful season with a dinner, June.
research bureau the mecca of the heating engineers at their mid-summer meeting, July.
election of officers of Massachusetts Chapter, Aug.
New York Chapter urges government support of Working Conditions Service of Labor Department, Aug.
New York Chapter prepares for active season, Oct.
engineers face to face with a new era in association work (New York Chapter), Nov.
Eastern Pennsylvania Chapter hears talk on "Manufacture of Wrought-iron Pipe."
Kansas City Chapter elects officers and discusses "Aerology."
Illinois Chapter elects new officers, Nov.
New York Chapter's program, Nov.
New York Chapter discusses "o.1 as a substitute for fuel."
Western New York Chapter give——— data on heat transmission, Dec.
American Society of Mechanical Engineers, July.
Architect, the, and the cost-plus fee, April.

Baldwin, William J., wasteful practices in heating work, Sept.
Bement, A., experiences in using bituminous coal as a substitute for anthracite, Sept.
Boiler room piping connections, improving, Nov.
settings, approved, for burning soft coal, Oct.
Boilers heating, tendency towards drastic legislation for inspection of, Aug.
Boilers, successful types of smokeless, Sept.
what the public should know about heating, E. C. Molby, Sept.
Britain facing huge coal problem, Sept.
British Institution of Heating and Ventilating Engineers, May, Sept., Nov.
Building construction under the cost-plus-fixed-fee contract, A. E. Wells, Oct.
data in the United States, April.
Bureau of Mines laboratory in Pittsburgh, dedication of, Oct.

Calvert, Norman, W., the transmission of steam in a district heating system by means of high-velocity feeders, Aug.
Campbell, William B., forecasting heating loads, Oct.
Canadian industrial conference, Nov.
Carpenter, Professor R. C., death of, Feb.
proposed memorial to, Aug.
Cassell, J. D., heating and ventilating the standard schoolhouse, July.
Central station heating.
an efficient meter installation for large buildings, L. E. Croup, July.
correcting service connections in a central heating system, July.
determination of meter rates for heating service, Walter J. Kline, May.

603358

division of values between electrical and heating departments, May.
getting the heat to the consumer, Howard E. Long, July.
heating handbook, contents and arrangement of, Aug.
heating in Detroit, J. H. Walker, Aug.
items to be considered in fixing a heating rate, May.
the advantage of the combination central station heating plant, John C. White, March.
the transmission of steam in a district heating system by means of high-velocity feeders, Norman W. Calvert, Aug.
suggestions of public service commission (Ill.), for improving service and handling complaints, March.
why power may be considered as a by-product in a combination power and heating plant, May.
Chicago and Cook County School for Boys, test of, Meyer J. Sturm, Jan.
Chicago Commission on Ventilation.
air washer experiences, Samuel R. Lewis and Dr. E. V. Hill, June.
construction and equipment of portable school buildings, John Howatt and Samuel R. Lewis, Feb., April.
test of Chicago and Cook County School for Boys, Meyer J. Sturm, Jan.
the effect of sunlight on air, William J. Maurer, C. E., March.
utilization of waste heat from tunnels, P. J. Postel, May.
China waking up to the use of modern heating and ventilating apparatus, June.
Chimneys and chimney draft, William T. Harms, Sept.
Classroom ventilation, Konrad Meier, July.
Coal and electricity compared for the heating of houses, Aug.
cost of for generating steam, March.
dust harmless, methods of making, Feb.
experiences in using bituminous as a substitute for anthracite, A. Bement, Sept.
problem, Britain facing huge, Sept.
saving, hints on, Sept.
situation from the operators' point of view, J. D. A. Morrow, Nov.
shortage, the threatened, Aug.
Coke, by-product, William T. Harms, Feb.
Combustion, Morgan B. Smith, July.
Contractors' Service Corporation, Nov.
Co-operation between heating and plumbing contractors, Aug.
Corrosion, conservation of engineering materials, by the prevention of, Nov.
pipe, new tests in deoxidization of hot water to prevent, March.
Correspondence.
burning fuel-oil in house-heating boilers, Dec.
comparative advantages of high and low pressure steam in heating work, May.
code of rules on installation of piping, Sept.
crude oil and kerosene burners, Nov.
efficiency of direct radiation in rooms ventilated by exhause fants, Dec.
effect of humidity on heat required to raise air temperature, Oct.
engine horse-power formula in standard data sheet No. 49-A, June.
heating factory buildings with gas, Dec.
indirect heating problem, June.
keeping an outdoor water tank from freezing, May.
proportioning heat losses to room volumes, Oct.
pressures in air ducts, Sept.
sizing indirect radiator in recirculating systems, Aug.
Substituting pipe surface for radiators, May.
ventilators and waste piping in chemical laboratories, Aug.
Vento heater connections, Dec.
wages paid out-of-town workmen, Oct.
Cost of piping in relation to the power and heating plant, Oct.
Croup, L. E., an analysis of steam trap troubles, July.
an efficient meter installation for large buildings, July.
Current heating and ventilating literature, June, Oct., Nov., Dec.
Date sheets, standard heating and ventilating.
4-B—temperature range—proper inside temperatures, Jan.
7-A—ventilation—exhaled air and diffused body heat, Jan.
9-A—air—measurement of air flow, Feb.
9B—air—measurement of air flow, (cont'd), Feb.
49—boilers—boiler horse-power and raitos, April.
49A—boilers—boiler horse-power to engine horse-power, April.
11-C—duct and flue details, length of fan connection to heater, March.
107-F—flanged fittings, thickness of shell, Feb.
108-C—fittings, extra heavy—straight tees, crosses and flanged laterals, Jan.
108-D—fittings, extra heavy—bull-head reducing tees and crosses, flanged.
108-E—fittings, extra heavy, reducing laterals, flanged, Feb.
128-A—flow of steam in pipes—capacity of steam mains, ⅛ lb. drop, July.
128-B—flow of steam in mains—capacity of steam mains, ¼ lb. drop, March.
128-C—flow of steam in pipes—capacity of steam mains, ½ lb. drop, April.
128-D—flow of steam in pipes—capacity of steam mains, 1 lb. drop, May.
128-E—flow of steam in pipes—steam pipe sizes, May.
128-F—flow of steam in pipes—sizes of return mains, June.
128-G—flow of steam in pipes—sizes of return mains (cont'd), June.
128-H—flow of steam in pipes—drip pipe sizes, July.
129—one-pipe steam systems—general, March.
129-A—one-pipe steam systems—circuit main, Mch.
129-B—one-pipe steam systems—relief systems, April.
129-C—one-pipe steam systems—Mills system, May.
129-D—one-pipe steam systems, radiator connections, May.
129-E—one-pipe steam systems—radiator runouts and main line vents, June.
129-F—one-pipe steam systems—drop in pressure and rise of returns, June.
129-G—one-pipe steam systems—pipe sizes, July.
129-H—one-pipe steam systems—riser sizes, July.
129-I—one pipe steam systems—radiator connections, Aug.
131—vacuum heating systems, general, Aug.
131-A—vacuum heating systems—pipe sizing, Aug.
131-B—vacuum heating systems—piping details, Aug.
131-C—vacuum heating systems—piping details (cont'd), Sept.
131-D—vacuum heating systems—piping details (cont'd), Sept.
131-E—vacuum heating systems—vaacuum pump suction connections, Sept.
131-G—vacuum heating systems—pipe connections, Oct.
131-H—vacuum heating systems—radiator connections, Oct.
132—vapor heating—general, Oct.
132-A—vapor heating—the Adsco system, Oct.
132-B—vapor heating—the Adsco system, (cont'd) Nov.
132-C—vapor heating—the Adsco system (concluded), Nov.
132-D—vapor heating—the Broomell system.
132-F—vapor heating—the Broomell system (cont'd), Nov.
132-F—vapor heating—the Broomell system (concluded), Dec.
132-A—vapor heating—the Broomell system (concluded), Dec.
136—fans, general, Dec.
136-A—fans—hand and discharge, Dec.
168-A—drives—belt--power transmitted, Dec.
DeBoos, F. A., fuel conservation by means of automatic temperature regulation, Feb.
Donnelly, James A., capacities of reducing valves for steam heating systems, July.
Draft regulation, undeveloped opportunities in the field of, Sept.
Ducts, radiation loss in uncovered galvanized-iron, Dec.
Dust separators, E. R. Knowles, Feb.
Ehrlich, M. William, engineering economics of heating, Feb.
Electricity, coal and, compared for the heating of homes, Aug.
Engineering brochure, another, containing manufacturers' advertisements, April.
council to urge higher compensation for engineers, Aug.
design and operation, error in, Nov.
economics of heating M. William Ehrlich, Feb.
society should be conducted, how an, Aug.

Engineers, report on proposed license law for, Jan.
Errors in engineering design and operation, Nov.
Estimating, payment for, Nov.

Factory roofs, arrangement of heating pipes an important factor in decay of, F. J. Hoxie, Feb.
Flint, C. F., supervision of steam power plants, Jan.
Forecasting heating loads, William B. Campbell, Oct.
Franklin High School, Portland, Ore.—designing data as applied to a large water heating plant, March. April.
Fuel administration, effects of power plant supervision by the, April.
Fuel conservation as a permanent movement, March.
conservation in Canada, Feb.
economy in humidity control, Oct.
for domestic heating, limiting the, Konrad Meier, Feb.
oil, use of, for house-heating boilers, Sept.
oil rules promulgated by N. Y. Board of Standards and Appeals, Dec.
outlook, the, Sept.
problems, British measures to meet, Feb.
saving in existing plants, possibilities for, Jan.
submarine defense association announces a new (colloidal fuel), April.

Gas heating, between seasons, Sept.
Government publications on regulations and standards for heating and ventilating, Jan.

Harms, William T., chimneys and chimney draft, Sept.
Hayhurst, E. R., M. D., experiments in air conditioning the house, Feb.
Heating buildings, new method of, Nov.
Heat transmission, mechanical engineers making research in, April.
transmission tables, new, William R. Jones, Jan.
Heater, rise of the unit air, June.
Heating and cooling an auditorium, novel arrangement for (Roosevelt Hall), Oct.
Heating and Piping Contractors' National Association —annual convention of master steam fitters prepares for readjustment period, July.
master fitters plan standardization program, Aug.
Heating and ventilating plants and mechanics liens, Arthur L. H. Streeter, May, June.
and ventilating the standard school house, J. D. Cassell, July.
Heating and ventilation, government publication on requirements and standards for, Jan.
Heating, advantage of the combination central station heating plant, John C. White, March.
building, new method of, Nov.
engineering economics of, M. William Ehrlich, Feb.
gas, between-season, Sept.
loads, forecasting, William B. Campbell, Oct.
pipe coils of U-shape for steam, Jan.
plant, water, designing data as applied to a large, George E. Reed, March, April.
plant in the world, the greatest, March.
plants, school, bulletin on operation of, Feb.
system, remodeling a, Helen R. Innis, Oct.
system fan, installed without the use of galvanized iron, F. B. Rowley and John R. Allen, Aug.
unit, the development of the individual forced blast, July.
utilization of the sprinkler system piping for, A. W. Moulder, July.
vapor, modern practice in, Jan., Feb., March., April, May, June, July, Aug., Sept., Oct., Nov., Dec.
work, wasteful practices in, William T. Baldwin, Sept.
Hill, Dr. E. V., and Samuel R. Lewis, air washer experiences, June.
High cost of living—expenses of distribution as the main factor in the, Aug.
Hill, Leonard, modern housing schemes and the heating question, Aug.
Hoffman, J. D., notes on figuring radiation, May.
Howell, Lloyd, practical economies in the use of steam heat, June.
Hoxie, F. J., arrangement of heating pipes an important factor in decay of factory roofs, Feb.
Howatt, John and Samuel R. Lewis, construction and equipment of portable school buildings, Feb., April.
Humidity control, fuel economy in, Oct.

Individual forced blast heating unit, the development of the, July.
Industrial conference, rise and fall of the, Nov.
Innis, Helen R., remodeling a heating system, Oct.
International trade conference at Atlantic City, Oct.
Jones, William R., new heat transmission tables, Jan.

Kline, Walter J., determination of meter rates for heating service, May.
Knowles, E. R., dust separators, Feb.

Legal decisions.
abandonment of service, June.
apportionment of costs of operation, Oct.
by-product service—apportionment of expenses, Oct.
city's power to increase heating rates, Oct.
conditional sale of heating plant, June.
construction of heating plant installation contract—architect's certificate—clause as to completion, Dec.
contract provisions on letter heads not binding, Dec.
cost of repairing heating plant, May.
heating apparatus as realty fixtures, April.
heating and humidifying patent, May.
heating utility cannot discriminate in its service, Oct.
increase of rates equal to increased cost of coal, June.
jurisdiction of commission to change heating rates, Jan.
liability of mortgagee for installing heating plant, Sept.
maximum charge for steam heating, Sept.
new decision on contractor's responsibility under owner's plans, April.
parol license to install steam heating pipes, Sept.
rate of depreciation for central heating plants, April.
rates—determination of radiation, May.
right of private heating utility to increase rates, April.
uncovered water pipes part of radiation, April.
waiver of stipulation in heating contract, Aug.
whether heating plant part of realty or not here a jury question, Aug. warranty test, Jan.

Lewis, Samuel R. and Dr. E. V. Hill, air washer experiences, June.
and John Howatt, construction and equipment of portable school buildings, Feb., April.
License engineers, Canadian proposal to, June.
law for engineers, report on proposed, Jan.
Lincoln School, Rockford, Ill.—a school ventilating system that is different, Aug.
Long, Howard, E., getting the heat to the consumer, July.

Mauer, William, J., C. E., effect of sunlight, on air, March.

Mechanics' liens, heating and ventilating plant and, Arthur L. H. Street, May, June.
Meier, Konrad, classroom ventilation, July.
limiting the fuel for domestic heating, Feb.
Meter installation for large buildings, a large, L. E. Croup, July.
Meters, notes on the operation of condensation, F. A. Tucker, Dec.
Minnesota, revised rules in, for schoolhouse equipment, Jan.
Molby, E. C., what the public should know about heating boilers, Sept.
Morrow, J. D. A., coal situation, the, from the operators' point of view, Nov.
Massachusetts, ventilation commission appointed in, Feb.
Moulder, A. W., utilization of the sprinkler system piping for heating, July.

National association of building trade employers, for a, Nov.
association of master plumbers backs trade extension campaign, Aug.
building guild, towards a, July.

National District Heating Association.
plans made at annual meeting for advance of the industry under new conditions, July.
National Federation of Construction Industries, activities of, April.
National Pipe and Supplies Association, June.
National Warm Air Heating and Ventilating Association, annual meeting of, July.

Oil fuel, use of for house-heating boilers, Sept.
Oxy-acetylene welding, rapid growth of, Oct.

Pay of technical engineers and draftsmen, May.

Pipe coils of U-shape for steam heating, Jan.
corrosion, new tests in deoxidization of hot water to prevent, March.
Piping, cost of, in relation to the power and heating plant, Oct.
Piping and Heating Contractors' National Association —master fitters plan standardization program, Aug.
Postel, F. J., utilization of waste heat of tunnels, May
Power plant engineering.
approved boiler settings for burning soft coal, Oct.
designing data for power plants, March.
improving boiler room piping connections, Nov.
Power plant supervision, effect of, by the fuel administration, April.
plants, supervision of steam, C. F. Flint, Jan.
Prices should be standardized, should? Nov.
Psychrometric chart explained, L. A. Wilson, Aug.
Pumps, operation of boiler-feed and other, May.

Radiation, notes on figuring, J. D. Hoffman, May.
proposed standard rule for computing required, June.
Railroad buildings, rules for equipment and care of, April.
Rates for heating service, determination of meter, Walter J. Kline, May.
Reconstruction era, Feb., March, April, May, June, July, Aug., Sept., Oct., Nov., Dec.
Reconstruction program outlined by war services committees, Jan.
Reducing valves, capacities of, for steam heating systems, James A. Donnelly, July.
Reed, George C., designing data as applied to a large water heating plant, March, April.
Refrigeration in relation to air conditioning in war industries, June.
Remodeling a heating system, Helen R. Innis, Oct.
Reynolds, T. W., wasteful practices in heating work, Sept.
siphon and its relation to heating work, Dec.
Roosevelt Hall, Mooseheart, Ill.—novel arrangement for heating and cooling an auditorium, Oct.
Rowley, F. B. and John R. Allen, a fan heating system installed without the use of galvanized iron, Aug.

Salt, use of in heating to eliminate soot, Jan.
Schaphorst, W. F., power required for ventilation, Oct.
School buildings, air washing and humidification for, Perry West, Feb.
buildings, portable, construction and equipment of, John Howatt and Samuel R. Lewis, Feb., April.
heating plants, bulletin on operation of, Feb.
ventilating system that is different (Lincoln School), Aug.
Schoolhouse equipment, revised rules in Minnesota for, Jan.
heating and ventilating, the standard, J. D. Cassell, July.
Siphon and its relation to heating work, T. W. Reynolds, Dec.
Smith, Morgan, B., combustion, July.
Smokeless boilers, successful types of, Sept.
Soot, use of salt in heaters to eliminate, Jan.
Sprinkler system piping for heating, utilization of the, A. W. Moulder, July.
Standard rule, proposed for computing required radiation, June.
heating and ventilating data sheets, full list of published to date, Sept.
Standardization program, master fitters plan, Aug.
Steam, flow of, in pipes, simplifying calculations for, April.
heat, practical economies in the use of, Lloyd Howell, June.
the waste and abuse of, Jan.
transmission of, in a district heating system by means of high-velocity feeders, Norman W. Calvert, Aug.
Steam trap troubles, an analysis of, L. E. Croup, July.
Street, Arthur L. H., heating and ventilating plants and mechanics' liens, May, June.
Sturm, Meyer, J., test of Chicago and Cook County School for Boys, Jan.
Submarine defense association announces a new fuel (colloidal fuel), April.
Sunlight on air, effect of, William J. Maurer, C. E., March.
Supervision of steam power plants, C. F. Flint, Jan.

Temperature regulation, automatic, fuel conservation by means of, F. A. De Boos, Feb.
Trade Extension Bureau.
bulletin on short cuts in estimating, Oct.
bulletin on "business efficiency" course, Nov.
elects new officers, July.
let T. E. B. be your best friend, Sept.
new directory of heating and plumbing contractors, Nov.
prepare for the future, Nov.
standard method of estimating heating jobs, Sept.
the principle of "fixed charge" or operating cost, Nov.
Trade Extension Bureau launches new campaign for "building bigger business," May.
Tucker, F. A., notes on the operation of condensation meters, Dec.
Tunnels, utilization of waste heat of, F. J. Postel, May.
Turbine, automatic bleeder, Jan.

Unit air heater, rise of the, June.
heaters, installation of, in Ford Eagle works, Aug.
United States Fuel Administration, bulletins of the, March.
revived, Dec.

Vapor heating, modern practice in.
VII—the Bromell system, Jan.
VIII—the Webster system, Feb.
IX—the Mouat-Squires system, March.
X—the Dunham system, April.
XI—the Trane system, June.
XII—the Kriebel system, July.
XIII—the Simplex system, Aug.
XIV—the Trane system (large installations), Sept.
XV—the Donnelly system, Oct.
XVI—the Eddy system, Nov.
XVII—the Nefco system, Dec.

Ventilation commission appointed in Massachusetts, Feb.
Ventilating system, school, that is different (Lincoln School), Aug.
Ventilation, classroom, Konrad Meier, July.
power requirements for, W. F. Schaphorst, Oct.
progress of unit, June.

Walker, J. H., central station heating in Detroit, Aug.
Weather, winter, of 125 years ago, April.
Wells, A. E., building construction under the cost-plus-fixed-fee contract, Oct.
West, Perry, air washing and humidification for school buildings, Feb.
White, John C., the advantage of the combination central station heating plant, March.
Wilson, L. A., the psychrometic chart explained, Aug.
Window screens, rise and fall of the muslin, Feb.
shades, a test of the conductivity of, John R. Allen, Feb.
Winter building the answer to the year's construction delays, Nov.
Wood as a fuel and how to use it, Oct.
Wrinkles.
alternating receiver and its connections, Oct.
automatic temperature regulation for the individual duct system, Aug.
basement radiator connections, Oct.
common errors in the installation of propeller fans with resulting short-circuits, June.
conditions affecting air change, June.
concealed or recessed radiators, Aug.
economy in duct construction, June.
effect of pocket in an overhead supply main, Nov.
factors involved in the heating of waiting rooms, Nov.
false water-line trap, Nov.
how to support a steam pipe across a span when upright supports cannot be used, Aug.
joists for duct work, Aug.
maintaining the circulation in an isolated radiator, Nov.
methods of installing and protecting concealed piping, Oct.
notes on dripping mains and risers, Oct.
permanent and temporary pipe supports, June.
problems in running vacuum heating return piping, Nov.
provision for expansion in the use of cast-iron flanged pipe, Aug.
suggestive pipe hangers, Oct.
ventilation for the roof, Aug.
Vento heater connections for various types of systems, Oct.
Weather charts for New York, Boston, Pittsburgh, Chicago, St. Louis, Jan., Feb., March, April, May, June, Dec.
